develop their full flavour**

**Food preparation, rinsing
vegetables and fruits,
is more effective**

**Your cooking is
enhanced**

**All this with no
filters to change
and little
maintenance**

**The EcoWater Systems Central Water Filtration:
great tasting water at every tap of your home**

EcoWater Systems Central Water Filtration

great tasting water at every tap of your home

With **EcoWater Systems Central Water Filtration** your water is filtered and clear for your whole home.

You will find your tap water has become nice and pleasant to drink! No more bad taste and odor due to the chlorine or organics.

Your coffee and tea will develop their full and pure flavour.

Food preparation, rinsing vegetables and fruits, will be more effective.

Your cooking will be enhanced by using purified water.

And this great water will be available for your entire family throughout your home, when you take a shower or a bath, when you brush your teeth, when you wash your hands, at every moment of the day.

You will feel the difference even with your clothes when they come out of the washing machine.

The Filtersense™ technology

The **EcoWater Systems Central Water Filtration** is a system that you install at the point of entry of your home that will take out the chlorine taste and the bad odors and will filter sediments up to 15 to 20µ for your whole home. It benefits from the EcoWater Systems technology using the exclusive 3/4" valve.

No filters, little maintenance

The **EcoWater Systems Central Water Filtration** utilizes an AutoRinse™ process to automatically clean itself. Therefore no filters to replace and little maintenance.

Unlike other systems the **EcoWater Systems Central Water Filtration** delivers high quality water without significantly reducing the water pressure.

The **EcoWater Systems Central Water Filtration** reduces sediment that can build up in your home's plumbing, causing a reduction in water pressure, and can build up in your major appliances potentially affecting their performance and life expectancy.

Service Flow Rate	23 l/min
Pressure Drop at Service Flow	< 0.7 bar
Water Pressure Limits (min/max)	2-8.6 bar
Water Temperature Limits (min/max)	4-49°C
Water consumption per recharge	< 50 L
Maximum flow to the drain	13 l/min
Life span media*	10 years

*Depending on the water quality.
